3PACK	AT Films	PGH-Lumi24x100	24' x 100' 6 mil Clear, Luminance Light Diffusion Greenhouse Plastic with 4 yr UVI. Light Diffusion reduces shadows and allows the plants to receive a more even distribution of light during the day. Although the intensity of light at any one point in time may be lower under a diffused film, the total light transmission is excellent and the plants may actually utilize more PAR light through the course of a day, with less stress. This is due to the more even distribution of light at crop level. By eliminating shadows and spreading available energy more evenly on the leaf surface, there is less stress on the top canopy of the plant and more photosynthesis occurring in the lower canopy. 3PACK	AT Films	PGH-Therm40x100	40' x 100' 6 mil Clear, Thermax Condensation Control Greenhouse Plastic with 4 yr UVI. A condensation control film is modified to have a high affinity for water. Condensed water no longer forms droplets but instead forms a continuous thin sheet of water over the entire film surface. The advantages of a condensation control film are; Water is able to drain more evenly and will flow to the lowest point of the film's surface more readily, Water on the film has an increased ability to flow over wrinkles that would normally be a prime location for dripping, Light transmission is significantly improved, often to the point of not being affected at all.	Roll	\$401.47
